EDUCATION

McMaster University

Bachelor of Computer Engineering; GPA: 3.8/4.0

Hamilton, Ontario

Sep. 2023 – Apr. 2028

Relevant Courses: Data Structures & Algorithms, OOP, Principles of Programming, Linear Algebra

EXPERIENCE

Software Engineering Intern

PointClickCare — Clinical Platform

May. 2026 – Aug. 2026

Mississauga, Ontario

- Shipped the Durable Medical Equipment section of the resident discharge workflow end-to-end to production with **React 18/TypeScript** micro-frontend (Vite Module Federation, TanStack Query) and **Java/Spring Boot** APIs, digitizing equipment tracking on a clinical platform serving **2M+** patients across **27K+** care facilities
- Migrated the team's repo out of a clinical monolith, rebuilding CI from **Jenkins** to **GitHub Actions** and porting E2E tests from **Cypress** to parallelized **Playwright**, cutting CI time **87% (40m → 5m)**

Software Engineering Intern — AI/ML Systems

Ericsson

Jan. 2026 – Apr. 2026

Ottawa, Ontario

- Built a dual-engine (Python **hashlib** / R **digest**) caching layer for the telecom **KPI feature pipeline**, deduplicating S3 parquet reads and cutting latency **75% (8m → 2m)** across **50+** operators
- Architected an integration test suite using **pytest**, **WireMock**, and **AWS LocalStack**, enabling deterministic CI for ML data workflows and increasing code coverage from **12%** to **64%**
- Built a distributed **PySpark** + **boto3** pipeline with 50-thread parallel file discovery, processing **1M+** S3 parquet files/day across **50+** operators to feed downstream **ML** workloads

Software Engineering Intern — Observability & Data Platform

Ericsson

Sep. 2025 – Dec. 2025

Ottawa, Ontario

- Implemented a distributed **OpenTelemetry** pipeline in **Go**, consuming **Kafka** streams and exporting to **PostgreSQL** and **VictoriaMetrics**, processing **10M+** logs/day and reducing polling latency by **80% (15m → 3m)**
- Built observability dashboards using **Typescript** and **AngularJS** enabling real-time visualization and improving fault analysis speed by **30%** for the Cloud RAN team
- Developed CI/CD pipelines in **Jenkins** and **Spinnaker** to build, validate, and deploy CSAR packages, improving release efficiency by **15%**

Engineering Lead

Taylor Systems (Startup developing smart-home IoT solutions for a residential village)

May. 2025 – Aug. 2025

Mississauga, Ontario

- Led a **10-engineer team** delivering firmware and IoT backend projects, running daily standups, scoping technical roadmap, and aligning funding and priorities with executive leadership
- Architected a real-time backend leveraging **WebSockets** to stream IoT sensor data with live alerting and **Prometheus** metrics, improving data throughput by **300%**
- Designed and implemented reusable **C++** communication libraries to control **12+** industrial devices via Modbus RTU over RS-485, extending communication range to **1.2 km** and reducing packet loss by **40%**
- Scripted a deployment pipeline in **Python** and **Bash** that automated **90%** of flashing and validation, reducing technician setup time

TECHNICAL SKILLS

Languages: Python, Go, JavaScript, TypeScript, Java, SQL, Bash, C, C++

Frameworks: Spring Boot, Spring Security, JPA, MCP, Pydantic, Next.js, React, AngularJS, Express, Tailwind, Matplotlib, Pandas, NumPy, TensorFlow, PyTorch, OpenCV

Libraries: Prisma, Redux, Axios, Lodash, Chart.js, boto3, PySpark, JSON-RPC

Developer Tools: Git, AWS, Azure Kubernetes, Docker, Helm, Linux, Jenkins, Spinnaker, Maven, Node.js, PostgreSQL, SQL Server, MyBatis, Kafka, OpenTelemetry, VictoriaMetrics, OpenSearch, Prometheus, Grafana, MQTT, WebSockets, Modbus RTU/RS-485, OpenAPI/Swagger, Pytest, Cypress, K6, SonarQube, WireMock, LocalStack
